

H.W

1) JAVA generates hash code for every object. Find out what is the hash code in JAVA and the purpose of generating the hash code.

2) A hash code in JAVA is an integer value generated for an object by the `hashCode()` method. It represents object in numerical form.

Purpose :-

The main purpose of generating a hash code is to enable fast searching and storing of objects in hash-based collections such as

- Hash Map
- Hash Set
- Hash Table
